## **DETAILED ACTION**

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

## **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1 – 14 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 – 4, 6, 10 – 11, and 14 - 19 of copending Application No. 09/375,343 and in view of Roeder (US 4,337,772).

This is a <u>provisional</u> obviousness-type double patenting rejection.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both the instant application and application no. 09/375,343 disclose a sanitary napkin adapted to be worn in a crotch portion of an undergarment

comprising a fluid-pervious cover layer, an absorbent system, a liquid-impervious barrier layer, a thickness of less than about 5mm, a flexural resistance of not less than about 400g and at least one preferential bending zone extending from one longitudinal side area of the sanitary napkin to an opposite longitudinal side area, crossing the longitudinal axis of the sanitary napkin.

The difference between the instant application and the copending application number 09/375,343 is the provision of a pair of linear adhesive zones that extend along the longitudinal axis and are adjacent to respective side edges of the sanitary napkin and being capable of bonding the sanitary napkin to the undergarment.

Roeder teaches an adhesive backed sanitary napkin in which linear adhesive zones (12) are adjacent respective side edges of the sanitary napkin and are capable of bonding the sanitary napkin to the undergarment of the wearer as set forth in col. 5.

It would have been obvious to one of ordinary skill in the art to modify the sanitary napkin of the application no. 09/375,343 by providing linear adhesive zones because adhesive is well known in the art as a suitable attachment means for sanitary napkins.
